

5 Simple Ways to Save Water with Household Chores

1. Wash the car with a bucket or use a commercial car wash that recycles water.
2. When using a hose, control the flow with an automatic shut-off device.
3. Raise your lawn mower blade to at least three (3) inches to promote deeper roots and a root system that retains soil moisture.
4. Don't over fertilize lawns as they need more water to survive.
5. Sweep driveways, sidewalks, and steps rather than hosing them off.
